

Science WS4 WS8 Properties of rocks  
LO: Begin to name rock types based on their formation and properties.

19.1.21

**What went well**

- \* When you set up the limestone experiment, you noted down observations when something happened. Some of these had lots of detail – Well done!
- \* Superb work; you were able to recall the three rock types.
- \* You know that the rock cycle has no start or end point.

**Thing to check and edit**

- \* Gold/the medal is a type of metal and not a rock. Check you have put it in the correct column.
- \* Sometimes the rock type is confused with the process. Teach someone else the moment you came up with to describe how each rock type is formed (we did this in session 2).

**Next step:**

Practise your moves to help you remember the three rock types, especially sedimentary. We will be looking a bit closer at this rock type...
