

Thank you for sending in your maths work from last Thursday.

Please see below for the feedback.

maths	20.1.21
<u>LO: To select the correct operation</u>	
<u>What went well</u> <ul style="list-style-type: none">* The children knew what the + and – symbols meant so were able to select the appropriate symbol for the question.* The children showed good place value knowledge. They know which 3-digit number was the biggest.* Most children were able to easier answer the fluency style questions.	
<u>Thing to check and edit</u> <ul style="list-style-type: none">* Children got confused when the = symbol was in a different place (change the question around so that it is familiar to them and they can then answer it easier) Explain what the equals symbol means to an adult.* Choose two questions and use the inverse operation to check that their answer is correct	
<u>Next step:</u> When answering an investigation style question, can you find more than one answer? Think mathematically!
