

# STEPS TO SUCCESS WHEN ADJUSTING 3-DIGIT NUMBERS

1. Complete yesterday's steps by adjusting the original question.
2. Draw a number line. Write the first number at the beginning.
3. Look at your second number in the adjusted question and jump in hundreds.
4. Look at what you did to get to your adjusted method (e.g. +10).
5. Now, do the opposite on your number line (-10).
6. Finally, write your answer next to the original question.

(Look at all the imperative verbs!)
