

## STEPS TO SUCCESS WHEN ADJUSTING 2-DIGIT NUMBERS

1. Read original question
2. Leave the first number alone (Don't change a thing!)
3. Look at the second number in the question and underline the ones digit
4. Adjust the second number to the nearest WHOLE ten using the "5 or above give it a shove" song.
5. Write what you did (e.g. +1)
6. Write out the adjusted question underneath the original question
7. Draw a number line and put the first number at the beginning

8. Look at your second number in the adjusted question and jump in hundreds
9. Look at what you did to get to your adjusted method (e.g. +1).
10. Now do the opposite on your number line (-1)
11. Now write your answer next to the original question
