

To know that some surfaces reflect light.

LO: Beginning to set up simple practical enquiries, comparative and fair tests

I can set up a simple test.

I know what will make the test fair.

I can compare the results and apply them to a problem.

I can name some surfaces that reflect light.

First, gather materials from around the house

(ask a parents to help you with this) or use the materials provided if you are in school.

Next, test the materials to see if they are reflective.

Then, record your results.

Material	Reflects light	Absorbs light

Task

Using your research, design clothing for Wee Willie Winkie to wear out at night.

Label your materials and explain why you have chosen them.
