

10.2.21

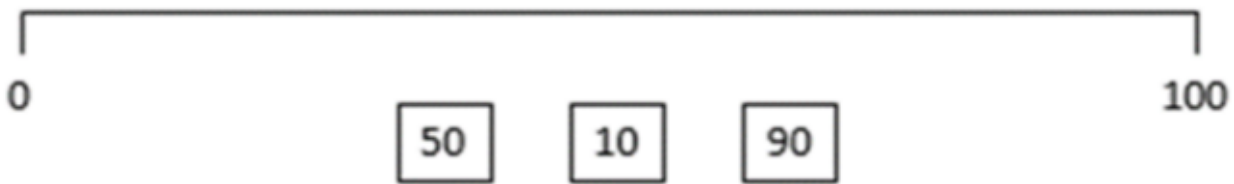

LO: Use the 0-10 number line to estimate the position of multiples of ten on a 0-100 number line

Here is a 0 - 10 number line, by using this, can you estimate (make a guess) where the multiples of 10 belong:

Dfd:

Put these numbers on the number line:

Which multiple of ten is this?

*'Where does seventy lie on this number line?'*

*'Where does forty lie on this number line?'*
